

The new hybrid working platform will be available in eight weeks.

Benefit from our high-performance, reliable and rugged working platforms, as well as from an excellent service and technical support world-wide.

H.A.B. presents a new hybrid-driven Areal Working Platform

S 225- 24 D4WDS hybrid

Our H.A.B. S 225 – 24 D4WDS has been equipped with a supplementary Electro-Drive to provide more flexibility in operation.

You can use the machine outdoors and as a zero-emission machine indoors. Furthermore, the working platform has non marking tires. The adequate electro-drive consists of a 540 AH battery, a powerful charger (220 V) and two electric motors with pumps.

You will find the same equipment in our articulated boom lift GT 20 D4WD, which provides a high and efficient battery capacity in operation. All functions can be used in the diesel and in the electric mode, including the self-leveling outrigger system.
